

EVER HEAR OF ARGENTIFEROUS GALENA FEVER? WHY NOT!

THERE IS AN ALASKAN GOLD RUSH, THANKS TO THE CHINESE —THE LARGEST GOLD PRODUCERS IN THE WORLD— GOING ON RIGHT NOW ON CABLE TELEVISION, AND IN THOSE BOGUS SPAM PRESS RELEASES OUT OF HASTINGS GULCH, VANCOUVER, BRITISH COLUMBIA. WHEN IT COMES TO ALASKAN SILVER —THE DOMINANT SILVER PRODUCING STATE IN THE US— WE HAVE BEEN KEPT UNDER CONTROL BY BRITISH ‘PRIME BANK’ FINANCIAL MARKETED ETF’S, AND THE HEAVY HANDED DOMINANCE OF THE STOCKPILE REPORTING OF GALENA ORE ON THE LONDON METAL EXCHANGE.

AGAIN, THANKS TO THE COMMUNIST CHINESE SHOWING HOW FREE ENTERPRISE, AND THE LAW OF SUPPLY AND DEMAND IS SUPPOSED TO WORK IN A CAPITALISTIC SOCIETY— THE SILVER (FOR SOLAR PANELS), AND LEAD (FOR ENERGY STORAGE BATTERIES WHEN THE SUN DOESN’T SHINE, OR THE WIND BLOWS), AND ZINC (FOR NONCORROSIVE FRAMES), AND COPPER (FOR CONDUCTIVITY TO COLLECT A SIGNIFICANT NUMBER OF SMALL AMPS TO MAKE A DIFFERENCE) IS SO MUCH MORE IMPORTANT IN THE BIG PICTURE OF SURVIVING CLIMATIC CHANGE THAT DAY TRADING ‘CASINO CAPITALISM’ STOCKS FOR A QUICK PAPER MONEY PROFIT, IS SUCH A WALL STREET SUCKER’S PEA AND WALNUT SHELL GAME!

AS THE SOLE OWNER OF THE WIN GROUP OF MINING CLAIMS, BOWSER CREEK, ALASKA, as represented below with a spreadsheet backed a portfolio of 15 very professional geological reports, on a property that has cost 40-years of my life, and \$4 million of my and OPM, to develop, the bottom line has come down to this:

1) “No, Wall Street, you cannot walk away with this asset for no money down to do a Facebook style IPO in the manner of the dot-com bubble of 1999-2000 and the Wall Street ‘sub prime’ financing bubble of 2006-08. Nor will I collateralize my property to fund your project — just because you pay the rent on a small telephone boiler room office operation in the financial district to provide a prestigious NYC address.

2) At age 72, I am very willing to retire from the job of trying to find the money to go into a production/exploration situation of 395,000 ounces of proven silver —\$11 million today, at a mining cost of \$4 million— to bootstrap develop a potential of \$250 million of ore.

Sorry, but I feel that my 7,000 acre property has been unfairly held back in a “free trade” situation from a legitimate ROI for a lack of investor dollars because multinational banks, who really do not really control the scarce supply of “above ground silver,” have rigged the market by selling derivatives just as “financially solid” as what AIT Insurance was reimbursed for by the ignorant American taxpayer.

I also am sorry for those who don’t remember the lessons of The Great Depression — especially paper stocks being sold on the margin— which has led us to a situation where London Prime Bank schemes, hostile takeovers, insurance wraps, hedge funds, platform trades, Texas style short sale flips, penny stock offerings, and bogus Toronto Stock Exchange stock option offering (no, not a “V for venture” listing) has resulted in the mining of mining investors, including those interested in rare earths in Idaho who had a trust in the SEC fairness when mining was so ‘politically incorrect’ during the 1980’s.

QUESTION:

**HOW DO YOU CHIP SAMPLE
A VERTICAL PLUNGE OF A
CLIFF FACE?**

WITH DIFFICULTY!

To keep Canadian VSX/TSX lawyers from suing me for liable, let me state that the truth from my actual documentable experience was that CAF, and Merrill Lynch Canada, used the Wall Street System to raise \$3.5 from investors (as reported by Google Finance) on an “earn-in joint venture” with the Win Claim Group — which somehow disappeared into Africa chasing blood diamonds, gold, and coal, that ran the share price down from 45¢, to .0001¢ without ever setting foot upon the claims! My reward was being stuck with a \$16,700 penalty, under State of Alaska Mining Law, for CAF, as “operator’s of the claims,” not doing the required assessment work to maintain title of a property optioned for a “good faith” payment of little more than what legal fees were required to further development.

If British Columbia’s Queen’s Bench lawyers have an objection to an America’s First Amendment rights to publically complain about pump and dump fraud, then let me remind then that in the Court of Public Opinion, the defense is the truth. Thank you Wikileaks for leading the way in Internet transparency. I am totally prepared, your Honor, to present my case in the format of online publishing the “protected” e-mails, which led myself misleading investors with a web site paid for by worthless TSX approved stock options. The joke that makes all this possible for me to even talk about is “London Financier,” the Honorable ‘NoWay’ David Way supposedly was buying into— not that long ago— a joint-venture development program, when the spot price of silver was at \$8 per ounce and raising.

Also, I should like to point out the absolute stupidity of to all the similar minded financial industry experts on things silver mining. How it it things “British” prevail, even when in things mining, all England has ever shared with the world is tin, and chalk. A certain class of Englishmen has even covered over the fact that Scotland —which has a visual topographic affinity

with Alaska — also has placer gold mineral rights owned by a Lord Haw Haw. Who knew!

Recently I had a fop on the phone with an very proper English Eaton accent, question the validity of my ore. This enquiry was followed up with an e-mail that spelled the vital ‘tenor of calculation’ equation as, “oar.” Sorry, old chap, but this ‘under educated Scots-Irish over the mountain frontier person’ would like to suggest, in your vernacular, that you are a ‘flaming twit.’

My answer to all these self-proclaimed Financial Industry Silver Wizards who bow to London, is to point to the over 400 pages of documentation (proven Canadian 43-101 compliment), online, that back-up the validity of the assays the spreadsheet below represent should be accepted as fact, over a yet-another-sampling, “within the last year” of rocks millions of years old.

My question, also, to other so-called experts, concerning one the most documented mineral prospects to come along, ever, is why do you do not believe U.S. Geological Survey geologists, and State of Alaska geologists, and the geologists employed by Homestake Mining (at the time when they were the largest gold mining company in America) plus other world-class consulting geologists, and an endorsement from the now defunct U.S. Office of Mineral Exploration (OME)?

Just using the figures from Geologist James Orr “high grade” adit exploration program alone, when silver had a spot price of \$2 an ounce, one would think I could make my point today issuing a spreadsheet with \$28 per ounce silver.

Sadly, silver has become a “financial” ping-pong game where China will become the winner. Please, if reading to do your due dillengence, look through the following spreadsheet and realize that the “penelty minerals” in Jim Orr’s day have, through lead being needed for green

**QUESTION:
EVER SEE A
SILVER NUGGET?**

Lead, Zinc, and Silver Deposits at Bowser Creek McGrath A-2 Quadrangle Alaska

HEAVY METALS BACK IN 1967,**

Washington 1968

energy storage, have led to the proposition that the Win Claims my truthfully be reclassified as a lead, Zinc, Copper, and silver mine that makes economic sense.

This is why I am not waiting for silver to bounce back to \$31 per ounce— after a massive sell off by speculators not wanting to be caught in an exposed, margin call futures disaster— to upgrade the spreadsheet below. Geologist's James Orr's mining plan based upon \$2 silver, actually became a viable bootstrap project when the spot price hit \$6. Even better is the associated ore minerals, when measured by the pound used to be freight penalty, have suddenly become very valuable.

I think it is time has come to look at the “reality” of investing in minerals. As silver. And, oh yes, lead, zinc, copper.

Today there are Chinese entrepreneurs waiting to buy the lead, zinc, copper, and silver “oar” because (if you can see by looking down on a globe) that via an environmentally friendly wintertime cat train, north, away from the long awaited ‘road to resource’ to Anchorage —thank you Palin for quitting us —instead to the bargeable Kuskowkim River, that Nanping, China, is closer than the mineral rich but bankrupt state of California.

The Far-East Chinese, since the California Gold Rush of Chinese-American migration, perhaps have actually understood American mining far better than the Back East “Industry Experts.” Guess what, The People's Republic of China recently passed South Africa by to become the largest gold supplier in the world.

They were the ones that read the geological reports I have online suggesting that the Win Claims, being on strike with Kuskokwim Gold Belt neighbors, might also have gold at depth past the suggested 300 foot depth of proposed Inferred Ore drill holes. They also understood

that the Humble Oil geologist who became very excited about the potential of massive copper at depth, was a major player in what has evolved today as Exxon Oil.

even while bootstrap exploring the rest of the property to prove up a potential of \$ 700 million!

So with pride I present here a very workable, and verifiable, 'depressed' \$28 silver mining spreadsheet that actually shows that just one part of the Win Group of Claims has 395,000 measured ounces of silver on the surface. As at \$28 dollar this silver is worth \$11 million, not counting the base minerals of an almost equal amount, this property was profitable to mine through a realistic expenditure of \$3 million,

Having just gone through a two month time-wasting proposal from yet-another silk stocking big bank bail-out boy, where he negotiated a sweetheart IPO deal bundling of the Win Claims, and my www.Nepheline.com claims containing 700 million tons of a interesting industrial mineral, this Alaskan mountain man person has to ask in New York-ese golly-gee city slicker accent: "Hey yuse guys, what-dda you want... egg in your beer???????"

Date	SILVER AG/troy oz	LEAD PB/lb	ZINC ZN/lb	COPPER CU/lb	GOLD AU/troy oz
17-Jan-11	\$28.32	\$1.20	\$1.09	\$4.39	\$1,361.00

Measured Mineable Ore

#1 Documented

Ore, in place, average 5 veins, measured length x width x depth by independent geologists recognized as 43-101 compliant by the TSX

Weighted Totals, by tons	AG/value per ton	PB/by % per ton	ZN/by % per ton	CU/by % per ton	Outside Numbers
54,400	\$203.88	\$67.68	\$66.49	\$9.66

TOTAL INDICATED ORE \$704,996,724

So, bottom line, those of you that are interested in the “financial truth” of doing business the old fashioned way of earning money by being an independent thinker, who just happens to have a few shekels left to invest in what is left of NASDAQ Director Bernie Maddox’s managed financial industry managed 401K hedge fund, let me suggest, in a reality internet sort of way that:

1) Alaska (an unknown fact) has become the largest producer of silver in all the fifty states of the United States.

2) Somehow, the truth of the situation, is that the Alaska Native owned partnership with a silver multinational corporation (an unknown fact) has run out of ore. Yes, it is true that the Red Dog property, once the largest zinc, lead, silver producer in North America, has run out of ore. They are waiting the permitting of another pit.

3) When it comes to non-corrosive zinc for frames, and lead needed for storage batteries when the sun is not shining, or the wind blowing, the Chinese miners (an unknown fact) are way ahead in the green energy use of silver based solar, and rare earths used in smart car engines.

4) You also need to remember that the Communist Chinese free enterprise system providing a check and balance casino capitalism is well trained in a stoical long-term “great leap forward,” that is kicking the concept of day-trading something as solid as wealth that comes from the earth, rather than being printed. As the U.S. owes China a trillion paper dollars (an unknown fact), how in the world can we be proud of MINUS 2.6 GNP last year —causing a moratorium on Social Security cost of living increase payment calculations— when the People’s Republic experienced through good financial management a 9.2% GNP increase.

5) That “good old-fashioned” American inge-

nuity into things to save our exported economy through high-tech disappeared when the Shanghai school system (an unknown fact) whipped our educational system in an international competition testing of reading scores. Is it any wonder that production of Apple’s “supercomputer” was outsourced to Shanghai.

So, as the U.S. system of financial management by Wall Street MBA’s has become such a financial joke — as demonstrated by the \$2 billion proposal of another “dot.com failure” Facebook IPO offering— I suggest if you may need to go around the SEC sanctions supporting a venture capital monopoly, with a back-to-business small mining plan that might be able to offer a price/earnings ratio. Please do not throw me in prison for not being one of the inside trader “good-old boys,” but perhaps one of the following elements might actually make this property work.

A) That there would be nothing illegal about becoming a banker yourself to lend money to mine that 395,000 ounces of silver, even without the false advantage of ten to one, or more, leverage. Collateral? Well how about suing the claims to qualify for a sub-prime mortgage?

B) That as the U.S. Supreme Court has held individual unpatented mining claims to be “real property” that perhaps there is a way that 173 forty-acre State of Alaska claims, totaling 7,000 acres might qualify for some sort of RIT of the type that the housing bubble helped create.

C) And since the printing precessing at the nations largest ATM are working overtime creating a situation similar to the Wiermark Republic little problem where it was cheaper to burn marks in a fireplace to keep warm, than buy a commodity know as coal, how abot laundering dollars that will be paid back in silver bullion?

Bottom Line— if you have some ideas how to actually make this property work that aren’t just tapdancing— then let me know, direct!
